

The schematic diagram illustrates the power supply section of the KLDX-0202-BC J1. It features a +9VIN input line that passes through a 4628 fuse (F2) and a 10uF capacitor (C12) connected to ground. The output of the fuse is connected to a 100nF capacitor (C13) connected to ground and a +9V output terminal. A diode (U4) is connected in parallel with the output capacitor.
